Meet Goel

AI Consultant | Generative AI, AI Agents & Data Science
Erlangen, Germany | +49 1777 883326 | meetgoel12345@gmail.com | linkedin.com/in/meet-goel | meetgoel.github.io

PROFESSIONAL SUMMARY

M.Sc. Data Science candidate and working student at Siemens Healthineers with 2 Siemens roles spanning AI agents, enterprise data applications, and IT interface architecture. Designs and deploys Generative AI agents that turn operational data into KPI dashboards and management reports, and builds Azure SQL data models with governed business logic. Specializes in machine learning and NLP in Python. International background across India and Germany, working fully in English.

PROFESSIONAL EXPERIENCE

Working Student, Service Management and Operations May 2026 – Present
Siemens Healthineers | Erlangen, Germany

- Built Ticket-to-Talk, an AI agent in Microsoft Copilot Studio that analyzes incident exports from the SHARP ticketing system and generates a filterable dashboard with KPI metrics and an incident summary
- Extended the agent to produce presentation-ready PowerPoint decks in the team's custom template, turning raw incident data into management reporting
- Built the Interface Catalogue, a Power Apps application on a 13-table relational data model in Azure SQL Server, with bulk Excel ingestion via Power Automate, giving Service Management Operations one source of truth for technical interface metadata across enterprise systems
- Implemented business rules and data quality controls in T-SQL stored procedures (existence checks, auto-creation logic, global search), keeping logic in the governed data layer rather than the front end
- Automated communication documentation with a Copilot Studio agent and Power Automate as part of departmental AI enablement

Technologies: *Microsoft Copilot Studio, Microsoft Azure, Azure SQL Server, T-SQL, Power Apps, Power Automate, PowerPoint*

Intern, IT Order-to-Cash Feb 2026 – May 2026
Siemens Healthineers | Erlangen, Germany

- Designed and deployed multiple Generative AI agents in Microsoft Copilot Studio, translating department process requirements into working agent solutions
- Modeled the IT Order-to-Cash interface architecture in SAP Signavio, mapping how business processes flow across integrated enterprise IT systems

Technologies: *Microsoft Copilot Studio, SAP Signavio*

EDUCATION

M.Sc. Data Science (AI and Digital Business, Computer Science) Sep 2024 – Expected 2026
Gisma University of Applied Sciences | Potsdam, Germany

B.C.A. Computer Applications July 2021 – July 2024
IMS Ghaziabad (University Courses Campus) | Ghaziabad, Uttar Pradesh, India

- Winter Training Program in Full Stack Development, IIT Kanpur

TECHNICAL SKILLS

Generative AI & Agents: Generative AI, AI agents, LLM prompting and evaluation, Microsoft Copilot Studio, Hugging Face Transformers, Qwen2.5 (open-weight LLM)
Machine Learning & Data Science: Python, Machine Learning, Deep Learning, NLP, scikit-learn, model interpretability (LIME), robustness testing
Data Engineering & Cloud: SQL, T-SQL, relational data modeling, data quality and governance, Microsoft Azure (Azure SQL Server), AWS (EC2), Docker
Business Process & Enterprise Apps: SAP Signavio, interface architecture, Power Apps, Power Automate, Power BI, Excel
Languages: English (professional working proficiency), German (limited working proficiency)

PROJECTS

Master's Thesis: Cross-Lingual Offensive Language Detection in Dravidian Languages 2026 – Present

- Built a Python NLP experiment pipeline measuring cross-lingual transfer from HASOC to DravidianCodeMix (Tamil, Malayalam, Kannada) across zero-shot, few-shot (50, 100, 500 examples), and monolingual baselines
- Benchmarked fine-tuned transformer models against LLM in-context prompting (Qwen2.5-1.5B-Instruct) on code-mixed, low-resource text
- Validated results with multi-seed robustness sweeps and LIME interpretability analysis of model decisions

Technologies: *Python, Hugging Face Transformers, LIME*

CINEMATE: Movie Recommendation System Oct 2025 – Nov 2025

- Built and deployed a content-based NLP recommender on the TMDB dataset using TF-IDF vectorization and a similarity matrix, hosted on AWS EC2 with a custom web interface

Technologies: *Python, scikit-learn, AWS EC2*
